PROFESSIONAL EXPERIENCE

Ernst & Young U.S. LLP

Senior, Tax Technology & Transformation (Products)

July 2025 – Present

- Co-led a 35-developer team for TPDS (Transfer Pricing Documentation Solution), an EY enterprise SaaS platform supporting 1,000 global engagements and 5,000+ users. Owned production stability and all production bugs in Azure DevOps. Drove sprint planning and feature prioritization across Application, Platform, and AI teams. Led UAT with a dedicated transfer pricing team and coordinated QA, developers, and security teams on fixes and releases.
- Built and deployed AI-assisted support automation for TPDS, automating approximately 90% of ticketing and triage for up to 20 production tickets daily. Connected Power Automate and SharePoint intake through Microsoft Graph to GitHub Copilot, Azure DevOps Git repository lookups, and read-only Azure SQL queries. Generated investigations with supporting evidence and proposed bugs, with human review and approval and duplicate checks before creation.
- Built a Python ETL pipeline with Pandas and NumPy, packaged in Alteryx, for Pillar 2 reporting across 120+ jurisdictions. Automated financial-data mapping, cleanup, and validation. Reduced manual effort by over 80% and saved 200+ engagement hours during provisioning for EY Seniors through Senior Managers reviewing Pillar 2 tax advisory risks.
- Gathered business requirements for Analyzer, a payroll platform. Turned a 150-page requirements document into a technical roadmap, functional designs, and Miro prototypes. Led triage of 150+ defects, fixed T-SQL payroll logic and Power BI relationships, and validated reports with SQL and Python reconciliation.
- Led an ETL modernization project for Analyzer payroll extraction. Reviewed 100 formats and 500 field-rule sets and designed a migration separating extraction code from configurable JSON rules. Built C#/.NET and Python prototypes, tested client files, and reconciled US outputs across both versions.
- Served as Product Owner for Pulse, a Power BI platform supporting engagement budgeting and performance reporting for partners and account leads. Improved reporting workflows for engagement performance and billing codes, helping managers and senior leaders review engagement economics, which generated 250k recurring annual revenue for my team.

Staff, Tax Technology & Transformation (Products)

January 2023 – July 2025

- Gathered user needs from business and engagement teams and wrote Azure DevOps stories and acceptance criteria. Worked with developers and QA to prioritize the backlog, plan sprints, and resolve delivery blockers.
- Supported production users, reproduced defects, and prioritized fixes. Traced differences between stored procedures and XML reports with SQL to isolate application defects.

PASSION PROJECTS

- RAG AI Assistant: Built a Python/FastAPI API with document ingestion, overlapping text chunks, OpenAI embeddings, and ChromaDB storage. Combined vector search and BM25 retrieval to return answers with source citations. Added health checks and retrieval diagnostics.
- Document Intelligence Pipeline: Built a Python/FastAPI pipeline converting PDFs and images into structured JSON. Combined Tesseract OCR, an EasyOCR fallback, and OpenAI field extraction. Added confidence scores, Pydantic data models, and batch-processing endpoints.
- Timeline Atlas: Built JavaScript and Leaflet visualizations of Google Timeline data covering 5,488 visits across 1,845 places across 4 years. Added date filters, visit and dwell-time rankings, travel paths, CSV export, and an animated Canvas view. Loaded route data on demand.

EDUCATION

CUNY Baruch College- Zicklin School of Business

Master of Science in Business Analytics, Concentration in Accounting Analytics, GPA: 3.75/4.0

Bachelor of Business Administration in Accounting, Minor in Psychology, GPA: 3.65/4.0

New York, NY

December 2022

May 2021

SKILLS

Programming and data: Python (Pandas, NumPy, openpyxl, scikit-learn), SQL (T-SQL), JavaScript, HTML/CSS, C#/.NET prototyping, R, JSON, ETL, data validation, reconciliation, Pydantic, REST APIs.

AI and analytics: RAG, embeddings, vector search, BM25, ChromaDB, OpenAI API, OCR (Tesseract, EasyOCR), structured extraction, geospatial visualization, Leaflet, Canvas.

Platforms and delivery: FastAPI, Azure SQL, Azure DevOps, Git, Microsoft Graph API, SharePoint, GitHub Copilot, Power Automate, Power BI, Alteryx, Miro. Requirements gathering, sprint planning, feature prioritization, UAT, production support.
